

Symptoms

The most common symptoms of coronavirus (COVID-19) are recent onset of:

- new continuous cough and/or
- high temperature
- a loss of, or change in, normal sense of taste or smell (anosmia)

(not a blocked or runny nose/ sore throat)

What to do if a member of your household develops symptoms of COVID 19

- If your child or anyone in your household develops symptoms of COVID-19, they should remain at home for at least 10 days from the date when their symptoms appeared.
- All other household members who remain well must stay at home and not leave the house for 14 days.
- The 14-day period starts from the day when the first person in the house became ill.
- Household members should not go to work, school, shops or public areas and exercise should be taken within the home.
- Household members staying at home for 14 days will greatly reduce the overall amount of infection the household could pass on to others in the community.
- The person with symptoms is the only one eligible for a test.
