

Helping your child with their maths learning:

Multiplication:

Practise multiplication facts for the 2s, 5s and 10 times tables.

We teach that the **x** sign = **groups of/rows of/sets of.**

We use **arrays** to help children learn these facts.

For example;

$$2 \times 5 = 10 \text{ (total number)}$$

$$\text{OR } 10 = 2 \times 5$$

2 **groups of 5**

OR 2 **rows of 5**

If children know that $2 \times 5 = 10$ they should also know:

$$5 \times 2 = 10$$

$$\text{OR } 10 = 5 \times 2$$

5 **groups of 2**

OR 5 **rows of 2**

Get children to make an array with counters or pennies and when they are confident, get them to draw their own arrays on paper.

Children must practise and know all multiplication facts for these tables by the **end of year 2.**

Remind them that the biggest number always comes at the end of multiplication sentences.

Division:

When they are confident with multiplication, children also need to know the related division facts for the 2s, 5s and 10 times tables.

We teach the \div sign using 2 different methods.

1. Grouping method:

\div means the same as “put into groups of....”

$$15 \div 5 = 3$$

15 put into groups of 5 = 3 (number of groups)

Put into groups of 5

2. Sharing method:

\div also means “shared into...”

$$15 \div 5 = 3$$

15 shared into 5 equal groups = 3 (number in EACH group/size of group)

Share into 5 equal groups

Get children to look at the links between division and multiplication.

For example:

If I know $2 \times 5 = 10$, then I know $5 \times 2 = 10$, $10 \div 5 = 2$ and $10 \div 2 = 5$

Help your child to practise both methods by using pennies, counters, or by drawing their own pictures on paper.

Remind children that the biggest number always comes first with division.
